

MIDDLE SCHOOL SCIENCE CURRICULUM

Middle school science curriculum covers Earth science in sixth grade. Earth science includes the study of Earth and space- the processes that shape the Earth. In seventh grade, Life science, which includes the study of life processes and the interactions of living things in their environment, is studied. Eighth grade covers physical science-- the study of the nature of matter, energy, force and motion. The nature of science including scientific processes, problem solving, patterns of natural events, and the use of technology is covered throughout the middle school science curriculum.
